

Anki Vector Dummy Cube Symbol Template

Print 2 Copies

1 Copy, cut out the symbols leaving all the white and. To keep it simple, just cut out in squares. These will be pasted/attached to the cube

Copy 2, cut out the entire black area (like a T), this can be wrapped around the cube to be used as a template for placing the symbols correctly. The Cube Top should align with the cap or the top of the cube (no lift notches, or where the lights would be on the real cube)
