

## READ ME

Dodongo's Cavern by MiniWorld 3D

Multi-Part Version

-----

Instructions:

1. You can print each individual STL on its own or with others of the same filament color.
2. The side walls, named "left" and "right" must be printed rotated 90 degrees, with the flat "outer wall" side on the print bed.
3. The ribs will likely need support, unless you have awesome cooling fans.
4. The skull and jaw can be printed without support. The Skull vertical, lying on the flat side behind it, and the jaw horizontal, as is.
5. Use a piece of filament for the hinges, trim a section of about 45mm long and insert it through the hinge holes.
6. Glue is not necessary but recommended to keep things in place, such as the skull on the wall and mainly the 4 central platforms over the lava, and the bridge.

-----

MiniWorld 3D is the collection of 3D printed landmarks and models of the real and FANTASY world! All our models are made from scratch by hand and brain, please give credit to all authors. This was modeled in Autodesk Fusion360. Please do not publish this online as yours. Talk to us for any redistribution or physical print sales, we are very open to work something out.
